

It's time... TWO CLEAN!

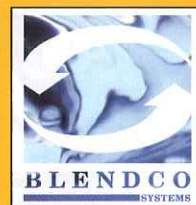

Now you can wash 3,600 cars using just 30 gallons of Two Clean concentrates in a touchfree automatic carwash. That's right, 3,600 cars – more than three times the industry average – without redelivery or redosing! So now you can afford to go beyond “clean enough” with Two Clean.

Two Clean ...

- Two-part liquid detergents – one part ultra concentrated alkaline liquid (cleaning power), one part ultra concentrated surfactant liquid (foam and ‘show’)
- A dilution tank steps down the alkaline strength for easy use in a range of applications
- The two parts (alkali and surfactant) are then combined to make a final detergent
